

Fatfish AI

One Interface Any Robot Real-world Execution

FATFISH AI

Visual Intelligence for Real-World Execution

1. WHO WE ARE

Fatfish AI is a Singapore-based embodied AI company developing visual intelligence that enables robots to see, understand, predict and act in real-world environments.

2. CAMP ONE

One Intelligence Engine. Multiple Robot Brands

CAMP One is our Visual Action Intelligence Engine, powered by specialized vision-action models.

Instead of building one massive general-purpose model, CAMP One combines pure vision, lightweight learning and cross-robot execution to solve specific challenges.

3. CORE TECHNOLOGIES

Predictive Vision Models

Recognize objects, understand workflows, anticipate risks and determine the next best action.

Cross-Robot Intelligence

Connect AI models, task planning and control systems across humanoids, quadrupeds and Physical AI.

Edge AI Execution

Run AI directly on robots for faster responses, greater reliability and stronger data privacy.

4. PROVEN IN SINGAPORE

Vision-Guided Humanoid Manipulation

Fatfish AI is developing and validating an autonomous material handling solution for a manufacturer in Singapore

The humanoid robot combines vision intelligence, autonomous navigation and manipulation to complete an industrial workflow
